

Summary

Workshop suggestion the result of discussions ESO/UKATC when agreeing the design study for an “evolved” ALMA Observing Tool.

To ensure work not isolated from other developments – we were aware of a few developments in progress – but not as many as it turns out are being at least considered

Proposal Systems

Excellent status reports & plans from 11 different observatories/organisations

Very interesting/stimulating – I learnt a lot. I hope others did.

AAA

Good discussion on this – again learnt a lot

Thanks to Davide Vagheti

How to integrate with Federated IdPs seems to be a good common area -> working group.

Communication

How do we keep this going?

- Slack?

Collaborating

- Workshop did not have explicit goal of creating shared products
- But a hope of at least sharing ideas, experiences
- Perhaps more
- Marketplace idea: How do we make it happen?
- Brian: So many new tools being designed/built/considered right now – seems like a very opportune moment.

Actions

- Adriaan Renting: enable us to remain in contact after the workshop by setting up some form of communication e.g. Slack
- Alan Bridger: Initiate a Federations Working Group
- Hanno Holties: find out which Northstar partners would like to be part of the Federations WG
- Maurizio Chavan: distribute the ESO/ALMA UI guidelines

Conclusion

- Been a very useful 3 days
- Some concrete outputs/ways forward for continued communication/collaboration
- Good shared thinking/experience
- Open, collaborative, meeting.

Thank You!
