The bibliographical entries for *Individual Stars* and *Collections of Data*, as well as a few *General* entries, are categorized according to the following coding scheme. Data from archives or databases, or previously published, are identified with an asterisk. The observation codes in the first four groups may be followed by one of the following wavelength codes.

g. γ -ray. i. infrared. m. microwave. o. optical
r. radio u. ultraviolet x. x-ray

1. Photometric data

a. CCD b. Photoelectric c. Photographic d. Visual

2. Spectroscopic data

a. Radial velocities b. Spectral classification c. Line identification d. Spectrophotometry

3. Polarimetry

a. Broad-band b. Spectropolarimetry

4. Astrometry

a. Positions and proper motions b. Relative positions only c. Interferometry

5. Derived results

a. Times of minima	b. New or improved ephemeris, period variations
c. Parameters derivable from light curves	d. Elements derivable from velocity curves
e. Absolute dimensions, masses	f. Apsidal motion and structure constants
g. Physical properties of stellar atmospheres	h. Chemical abundances
i. Accretion disks and accretion phenomena	j. Mass loss and mass exchange
k. Rotational velocities	

6. Catalogues, discoveries, charts

a. Catalogues	b. Discoveries of new binaries and novae
c. Identification of optical counterparts of γ -ray, x-ray, IR, or radio sources	d. Finding charts

7. Observational techniques

a. New instrument development	b. Observing techniques
c. Reduction procedures	d. Data-analysis techniques

8. Theoretical investigations

a. Structure of binary systems	b. Circumstellar and circumbinary matter
c. Evolutionary models	d. Loss or exchange of mass and/or angular momentum

9. Statistical investigations

10. Miscellaneous

a. Abstract b. Addenda or errata

Abbreviations

AD	accretion disk	IP	intermediate polar	RV	radial velocity
